Your Manufacturing Partner in Yeme

Flexible industrial and commercial cooperation

An established tissue converting operation in Aden

HOOR TISSUES operates two facial tissue converting lines, with warehouse facilities and local manufacturing experience. We invite qualified partners to explore practical cooperation models tailored to their commercial goals.

Why explore this opportunity?

Existing production infrastructure

Explore local converting without starting a new factory from zero.

Flexible market entry

Evaluate manufacturing, supply, distribution or investment arrangements.

Step-by-step approach

Begin with technical review and a pilot before long-term commitments.

All arrangements are subject to due diligence and mutual agreement.

Manufacturing Capabilities

Existing assets and current product scope

Two facial tissue converting lines

Nominal paper input capacities: 120 kg/hour and 200 kg/hour.

Combined nominal paper input: 320 kg/hour (not finished output).

Current facial tissue product range

500 soft | 500 embossed | 800 soft | 1100 soft

Commercial sales unit: bundle of 10 packs.

Local facilities

Existing manufacturing infrastructure and warehouse facilities.

Warehouse area and equipment availability: to be confirmed.

Product scope

Additional categories require technical and commercial feasibility review.

No commitment is made to produce wet wipes or toilet rolls on current lines.

Production figures are nominal input ratings, not guaranteed throughput.

Flexible Cooperation Models

Select one model or combine several

01 OEM / Contract Manufacturing

Local production of agreed facial tissue specifications under your brand.

02 Strategic Raw Material Supply

Supply jumbo rolls, packaging or related inputs under agreed terms.

03 Production Capacity or Line Leasing

Allocate capacity or lease equipment subject to operating terms.

04 Warehousing & Local Distribution

Explore storage, logistics and Yemeni market development.

05 Joint Venture / Strategic Investment

Evaluate working capital, expansion equipment and shared operations.

06 Technical & Product Development

Process optimization, training and jointly assessed new products.

What We Bring & What We Seek

Illustrative contributions - not binding commitments

HOOR TISSUES may contribute

Existing tissue converting infrastructure and equipment
Local operations, factory facilities and warehousing
Local market knowledge and manufacturing coordination

A partner may contribute

Jumbo tissue rolls, packaging or reliable supply arrangements
Working capital, trade finance or investment for expansion
Technical expertise, training and quality systems
Product specifications, branding and distribution development

Commercial structure

Ownership, pricing, exclusivity, operating responsibilities and asset use would be negotiated only after technical and financial due diligence.

Let Us Explore Cooperation

A practical pathway from introduction to pilot

Step 1 Initial discussion

Confirm the partner's products, target market and preferred cooperation model.

Step 2 Exchange technical profiles

Review line specifications, product samples and operating requirements.

Step 3 Feasibility and pilot

Evaluate landed input costs, conversion economics and trial volumes.

Step 4 Commercial agreement

Agree responsibilities, payment security, compliance and milestones.
